

AMENDMENTS TO THE CLAIMS

Please amend the claims as shown in the Listing of Claims below. This Listing of Claims will replace all prior versions, and listing, of claims in the application.

Listing of Claims:

1 to 18 (Cancelled)

19. (Currently Amended) An information processing apparatus that generates a print job based on a composite form file including a plurality of forms and page data which is laid on the form, outputs document data including a plurality of pages as a single print job; the apparatus comprising:

display means for displaying the plurality of forms included in the composite form file a setting screen;

selection means for selecting an arbitrary form from the plurality of forms displayed by the display means a specific page from the document data at which to halt processing of the print job;

setting means for setting an instruction to halt print processing using the arbitrary form of the print job, wherein the instruction is set via the setting screen;

determining means for determining whether a form of a printing object is the arbitrary form selected by selection means when a print processing using the composite form file is instructed;

halt command generation means for generating a halt command to halt print processing using the arbitrary form when the determining means determines that the form

~~of the printing object is the arbitrary form of the print job in accordance with the set instruction, wherein the halt command is inserted into the specific page selected from the document data;~~

job generation means for generating the print job based on the form of the printing object and the page data when the determining means determines that the form of the printing object is not the arbitrary form ~~document data, wherein the document data includes the generated halt command inserted into the specific page;~~ and

sending means for sending the print job or the halt command to a printing apparatus.

~~job output means for outputting the print job.~~

20. (Currently Amended) An information processing apparatus according to Claim 19, further comprising form generating design means for generating the form to which the page data is assigned. ~~document data, wherein the document data includes form information and wherein the setting screen is provided by the form design means.~~

21. (Cancelled)

22. (Currently Amended) An information processing apparatus according to Claim 20, wherein the display means displays form configuration of the form included in the composite form file ~~document data~~ in a tree structure, and wherein the selection

~~means selects the arbitrary form from the plurality of forms the specific page is selected from the document data displayed in the tree structure.~~

23. (Currently Amended) An information processing apparatus according to Claim 19, wherein the setting means sets at least one of a first resuming method or a second resuming method ~~for canceling halting the processing of the print job, wherein the first resuming method is initiated~~ resuming a print processing, which was halted, by receiving an instruction of a user and the second resuming method is initiated resuming the print processing, which was halted, upon expiration of a halt time period of the print processing, wherein the halt time period was set by the user ~~a specified time period.~~

24. (Previously Presented) An information processing apparatus according to Claim 19, wherein the setting means sets an instruction to either halt processing of the print job for the specific page or for the print job as a whole.

25. (Currently Amended) A ~~print-processing-control method that generates a print job based on a composite form file including a plurality of forms and page data which is laid on the form of outputting document data including a plurality of pages as a single print job, the method comprising:~~

~~displaying the plurality of forms included in the composite form file~~ a setting screen;

~~selecting an arbitrary form from the plurality of forms displayed by the display means a specific page from the document data at which to halt processing of the print job;~~

setting an instruction to halt print processing using the arbitrary form of the print job, wherein the instruction is set via the setting screen;

determining whether a form of a printing object is a selected arbitrary form when a print processing using the composite form file is instructed;

generating a halt command to halt print processing using the arbitrary form when it is determined that the form of the printing object is the arbitrary form of the print job in accordance with the set instruction, wherein the halt command is inserted into the specific page selected from the document data;

generating the print job based on the form of the printing object and the page data when it is determined that the form of the printing object is not the arbitrary form document data, wherein the document data includes the halt command inserted into the specific page; and

sending the print job or the halt command to a printing apparatus.

outputting the print job.

26. (Cancelled)

27. (Cancelled)

28. (Currently Amended) A print processing control method according to Claim 25, wherein the print processing control method is performed on an information processing apparatus including form generating means for generating a form to which page data is assigned on which a form design application for generating data including

form information is executed, wherein the document data is generated by the form design application, and wherein the form design application provides the setting screen.

29. (Currently Amended) A ~~print processing control method~~ according to Claim 25, further comprising displaying form configuration of the form included in the composite form file ~~document data~~ in a tree structure, and wherein the arbitrary form is selected from the plurality of forms wherein the specific page is selected from the document data displayed in the tree structure.

30. (Currently Amended) A ~~print processing control method~~ according to Claim 25, further comprising setting at least one of a first resuming method or a second resuming method ~~for canceling halting the processing of the print job, wherein the first resuming method is initiated~~ resuming a print processing, which was halted, by receiving an instruction of a user and the second resuming method is initiated resuming the print processing, which was halted, upon expiration of a halt time period of the print processing, wherein the halt time period was set by the user a specified time period..

31. (Currently Amended) A ~~print processing control method~~ according to Claim 25, wherein setting the instruction to halt processing includes either halting processing of the print job for the specific page or for the print job as a whole.

32. (Currently Amended) A computer-readable storage medium storing a print processing control program ~~stored on a computer-readable storage medium to the~~

processing control program generating a print job based on a composite form file including a plurality of forms and page data which is laid on the form-output document data including a plurality of pages as one print job, the print processing control program comprising:

displaying the plurality of forms included in the composite form file a setting screen;

selecting an arbitrary form from the displayed plurality of forms a specific page from the document data at which to halt processing of the print job;

setting an instruction to halt print processing using the arbitrary form of the print job, wherein the instruction is set via the setting screen;

determining whether a form of a printing object is a selected arbitrary form when a print processing using the composite form file is instructed;

generating a halt command to halt print processing using the arbitrary form when it is determined that the form of the printing object is the arbitrary form of the print job in accordance with the set instruction, wherein the halt command is inserted into the specific page selected from the document data;

generating the print job based on the form of the printing object and the page data when it is determined that the form of the printing object is not the arbitrary form document data, wherein the document data includes the halt command inserted into the specific page; and

sending the print job or the halt command to a printing apparatus.

outputting the print job.

33. (Cancelled)

34. (Cancelled)

35. (Currently Amended) A computer-readable storage medium ~~print processing control program~~ according to Claim 32, wherein the print processing control program further comprises generating a form to which page data is assigned ~~is a form design application, and wherein the form design application generates data including form information, wherein the document data is generated by the form design application, and wherein the form design application provides the setting screen.~~

36. (Currently Amended) A computer-readable storage medium ~~print processing control program~~ according to Claim 32, the print processing control program further comprising displaying form configuration of the form included in the composite form file ~~document data~~ in a tree structure, and wherein the arbitrary form is selected from the plurality of forms wherein the specific page is selected from the document data displayed in the tree structure.

37. (Currently Amended) A computer-readable storage medium ~~print processing control program~~ according to Claim 32, the print processing control program further comprising setting at least one of a first resuming method or a second resuming method for canceling ~~halting the processing of the print job, wherein the first resuming method is initiated~~ resuming a print processing, which was halted, by receiving an instruction of a

user and the second resuming method is initiated resuming the print processing, which
was halted, upon expiration of a halt time period of the print processing, wherein the halt
time period was set by the user a specified time period.

38. (Currently Amended) A computer-readable storage medium print processing
control program according to Claim 32, wherein setting the instruction to halt processing
includes either halting processing of the print job for the specific page or for the print job
as a whole.
